

ABSTRACT

There are provided a resin composition for sliding member, comprising 1 to 10% by weight of a hydrocarbon-based wax, 0.1 to 3% by weight of at least one compound selected from the group consisting of a phosphate, a sulfate and a carbonate, 1 to 20% by weight of a phenoxy resin, 0.1 to 5% by weight of a compatibilizing agent, and the balance of a polybutylene terephthalate resin, as well as a sliding member obtained by molding the above resin composition. The resin composition for sliding member and the sliding member obtained by molding the resin composition according to the present invention can exhibit excellent friction and wear characteristics even when used together with a slide mating member composed of a soft metal such as aluminum alloys.
